

## MEDIA RELEASE

Monday 21<sup>st</sup> September 2009

### CALLSCRIPTER – LEADING THE WAY IN TECHNOLOGICAL ADVANCES

**CallScripter, the Ipswich based subsidiary of IPPlus, will be showcasing their latest offering, CallScripter 4.2, at the Call Centre Expo this week.**

This updated and fully-integrated software programme will be featured on their stand, **H21**, at the **Birmingham NEC** for the whole two days of the show. Live, interactive demos will be taking place, with the opportunity for you to try your hand at script building.

Over the past eight years CallScripter have consistently continued to push the technological boundaries of call centre workflow management software and this year is no exception. **CallScripter 4.2** is designed to further assist your agents, whilst also improving their interaction with customers, and ensuring data quality is consistently high.

The latest additions to the **CallScripter 4.2** program mean that it is fully-functional in numerous languages, making it accessible all over the world. The application now supports localisation in the following languages: UK English, Dutch, French, German, Turkish, Spanish, Ukrainian and Russian.

Time is money, and with this in mind the control set of **CallScripter** has been revised for the new version. The existing control set was comprehensive, but often took time to navigate the large number of controls. The greatly enhanced layout, appearance and functionality will dramatically change the way users can build scripts, and make the agent experience that much better and effective.

Other new features that contribute to the advanced development of the CallScripter 4.2 include plugin controls, revised validations, new system variables to save script building time and provide consistency of variable naming across scripts, and a message queue that allows post call events to be automatically queued by the system. One client is already putting this to good use to send reminder text messages to customers, 24 hours before they visit one of their attractions.

Kevin Ellis, **CallScripter's** Sales Director, commented "We look forward to welcoming you onto our stand, and demonstrating exactly what our software is capable of. Our team have worked incredibly hard to develop the latest version of **CallScripter**, and we feel that it really reflects today's marketplace. The emphasis has been focused on making the product more effective, regarding both cost and time – primary concerns in a recession-hit economy."

### ENDS

#### Notes to Editors:

**IPPlus PLC** is an AIM listed business services group, whose interests include software and outsourced contact centres. The group, whose Headquarters are in Ipswich, Suffolk, trades under three main trading styles: Ansaback, CallScripter and IP3 Telecom.

**Ansaback** is a 24 hours a day, 7 days a week bureau telephony service providing overflow and out of hours call handling, emergency cover, dedicated phone resources, non-geographic, low call and freephone telephone facilities, as well as disaster recovery lines and other ancillary telecommunications services.

**CallScripter** is an enhanced customer interaction software suite, specifically developed for contact centres, telesales and telemarketing operations. By introducing **CallScripter's** dynamic scripting environment into their organisation, clients will gain immeasurable benefits to themselves, and their customers. The software facilitates the rapid set-up, handling and reporting of sophisticated inbound, outbound and email campaigns. The current client database encompasses a wide range of industries including outsourcers, financial services, helpdesk, telemarketing, internet providers, accident management and charities, meaning that it is the perfect application for any customer-facing environment.

**IP3 Telecom** provide a range of network-based interactive call services on either a managed basis or self-serve option. Clients can route their required services through IP3's web portal, allowing them to monitor their call traffic on real-time. Alternatively IP3 can generate periodic reports via email. The web portal allows fast and efficient configuration of services and is hosted across resilient platforms with triple redundancy for location, infrastructure and service providers. Web access allows for remote management from anywhere in the world, without any proprietary software requirement.
